SPECIAL NOTE: Based on today’s data, if we were to compare two (2) hypothetical populations of 100,000 people each, vaccinated versus unvaccinated, there would be 7 vaccinated people hospitalized for COVID-19 compared to 27 unvaccinated people hospitalized for COVID-19. The risk of being hospitalized for COVID-19 is about 4 times higher for the unvaccinated as compared to the vaccinated.

*Estimated population is based on DPHSS Immunization Program analysis of 2020 Census data. Updates are expected pending further Census 2020 data breakdown.
