High Risk of Rip Currents and Small Craft Advisory Remain in Effect

The National Weather Service (NWS) Weather Forecast Office Guam advised the effects of a trade-wind surge continue to affect the Marianas. The following advisories remain in effect:

A **high risk of rip currents** remains in effect for Guam, Rota, Tinian, and Saipan through Tuesday afternoon. Rip currents can sweep even the best swimmers away from the shore into deeper water. If caught in a rip current, do not swim against the current. Swim in a direction following the shoreline, face the shore and call or wave for help. Rip currents will be life threatening.

A **small craft advisory** remains in effect for the coastal waters of Guam, Rota, Tinian, and Saipan until 5 p.m. Tuesday. Northeast winds of 15 to 25 knots, with gusts up to 30 knots, and seas of 7 to 10 feet are expected. Conditions will be hazardous to small craft. Inexperienced mariners, especially those operating smaller vessels, should avoid boating in hazardous conditions.
