Locally Heavy Rainfall and Gusty Winds Possible Early Next Week; Hazardous Surf and Seas Expected

The National Weather Service (NWS) Guam Weather Forecast Office continues to monitor a developing tropical system, known as Invest 93W as it forms roughly 160 miles west-southwest of Guam.

93W has the potential to eventually develop into a tropical system. At this time, there remains uncertainty for the exact impact 93W will have on the Marianas but current model guidance indicates high likelihood for gusty winds, hazardous seas and surf, and locally heavy rainfall.

This is an evolving situation with impacts still 3-5 days out. Current forecasts call for rainfall of 4 to 8 inches between Monday and Thursday, with locally higher amounts possible, and winds of 25 to 30 mph, with gusts to 45 mph, especially near heavier showers or thunderstorms.

A **high surf advisory** is in effect for Guam, Rota, Tinian, and Saipan from 6 a.m. Saturday to 6 p.m. Sunday along south and west facing reefs. Large breaking waves of 8 to 10 feet are expected along south and west facing reefs of the Marianas. Remain out of the water due to dangerous surf conditions.

A **high risk of rip currents** is in effect for Guam, Rota, Tinian, and Saipan from 6 a.m. Saturday through Sunday afternoon along south and west facing reefs. Rip currents can sweep even the best swimmers away from the shore into deeper water. Inexperienced swimmers should remain out of the water due to dangerous conditions. If caught in a rip current, do not swim against the current. Swim in a direction following the shoreline, face the shore and call or wave for help.

A **small craft advisory** is in effect for the coastal waters of Guam and Rota from 6 a.m. Saturday to 6 p.m. Sunday. Southwest winds of 15 to 25 knots, with isolated gusts up to 30 knots, and seas of 8 to 10 feet are expected. Conditions will be hazardous to small craft. Inexperienced mariners, especially those operating smaller vessels, should avoid navigating in hazardous conditions.

Residents and visitors are advised to take the following precautionary actions:

- **Stay up to date with the latest information;**
- Be prepared to take action if warranted;
- Stay out of hazardous surf and seas;
- If driving, be alert for low visibilities and slippery roads in heavy rain;
- Slow down where water is ponding on the road;
- Turn Around, Don't Drown. Avoid walking or driving through flood waters. Just 6 inches of moving water can knock you down, and 2 feet of water can sweep your vehicle away;
- Do not camp, park, or hike along streams, and rivers, during heavy rainfall. These areas can flood quickly and with little warning.

The Offices of Guam Homeland Security and Civil Defense (GHS/OCD) remind the community to stay up to date with NWS products. Practice caution while traveling in heavy rain, driving below the speed limit and allowing enough braking distance between vehicles.
